

## Conditions for using UAS (drones) during your stay in Môlča

According to new rules issued by the Ministry of Defense of the Slovak Republic, Môlča, as well as the entire autocross area, is located in a geozone for the operation of unmanned aerial vehicles (UAS). According to the Ministry of Defense, geozones are precisely defined geographical areas in which specific rules for the operation of drones, restrictions, prohibitions or the obligation to coordinate with the relevant authorities apply. Their main purpose is to protect sensitive military sites from unauthorized civilian operation, prevent incidents and ensure the uninterrupted course of training or operational activities.

It follows from the above that **without the permission of the event organizer** and reporting the drone number to the organizer, **the use of drones and other UAS is prohibited**. Unreported movement of drones will be dealt with by **the Military Police**.
