

RSLite App Bug

April 14, 2026; 8:00AM

The most recent version of the RSLite app appears to have introduced a bug into the operation of the app. The bug will cause the screen to freeze for times upwards of 30 seconds. During this time, you may not see the mileage or speed update on the screen. SAS is investigating the issue, but a fix is unlikely to be in place for the rest of the Olympus Rally recce period. Other than the periodic screen freeze, the app is working as intended by recording data and speeding events. Competitors must continue to follow the recce regulations and use the RSLite app while on recce.

If you have any questions, please contact Preston Osborn at preston@ara-rally.com.

A handwritten signature in black ink, appearing to read 'P. Osborn', with a long horizontal flourish extending to the right.
