Details on the "Transfer" mode can be found in section 2.2 of this manual. Interaction with the device is possible thanks to the touch screen, but also with the buttons on the right side of the device. Each key is associated with the icons that will appear on the right of the screen, in each icon there will be the number corresponding to the key to be pressed. The device is set to English mode by default, but you can translate all the information. To translate all the information contained in the device, press the icon highlighted in **Fig. 1**, after pressing you will enter the screen in **Fig. 2**, press on the highlighted bar and choose Italian (**Fig. 3**).

2.1. Device Mode

The unit has two main modes. When the device detects that it is in a stage it will go into "On Stage" mode, while in all other cases it will be in "Transit" mode:

1. "Transit": Outside of a stage, the system goes into Transit. (Section 2.2).
2. "On Stage": During a Special Stage, the system automatically enters "On Stage" mode (Section 2.3).

2.2. Transit Mode

Under "Transit" the device will show the following information:

- current time and date (green box in **Fig 4**);
- real-time speed (red box in **Fig. 4**);
- signal quality and power supply to the device (no GPS; no connection to the Be Traced server).

2.3 On Stage Mode

Before entering Stage mode, the device shows the "Prepare for Stage" mode. In this mode, the device signals to the crew when a special stage is approaching. Once you have passed the start of the test, you will enter the "On Stage" mode. In this mode, the device shows:

- real-time speed (red box in Fig. 5)
- name of the special stage (blue box in Fig. 5)
- distance traveled since the start of the test (yellow box in Fig. 5)
- current time (green box in Fig 5).

In "On Stage" mode, the "Incident Signal" button will always be present to send any distress requests.

Fig. 5

At the end of the Special Stage, the "Flying Finish" screen will be shown (**Fig. 6**), which indicates the end of the Special Stage and the approach of the Stop, in this phase all safety systems remain active.

Fig. 6

The device, in "On Stage" mode, can automatically detect an incident using two parameters:

- acceleration/deceleration (calculated in force G) above the alert threshold;
- the device detects a stop in a special stage (**Attention:** if you restart in less than 50 seconds, the accident status is automatically cancelled).

The device, even if only one of the listed conditions is present, will ask the crew if they have been involved in an accident, showing the screen below. If the device detects a deceleration of more than 15G, it will automatically send the emergency signal to Race Direction.

Fig. 7

The crew must provide one of the options shown in **Fig. 7**. Tapping the OK icon will bring up the following options:

- OK ROAD CLEAR: the road is clear and the crew is fine;
- OK ROAD BLOCKED: the crew is fine, but the road is ENTIRELY blocked by the stationary car.

WARNING: It is mandatory to provide a response to this notice within 60 (sixty) seconds, otherwise as set out in NG Rally section 6.5.1 published by ACI Sport, you will incur a financial penalty established by ACI Sport in the aforementioned section.

2.5. Red Flag

If a serious accident or any impediment compromises the safety of the competitors on a stage, the Race Director may issue the red flag. As stated by the regulations, when the red flag is activated, all competitors who are before the involved coordinates, must immediately reduce their speed, because there is a serious accident or in any case impediments on a specific section of the special stage.

When the red flag is placed by the Race Director, the device located in the area affected by the red flag will immediately emit an acoustic signal, accompanied by a completely red screen showing the words "RED FLAG" (**Fig. 14**).

Fig.14

It is necessary to press the "ACK" icon (**Fig.14**) to send the confirmation of having received the red flag to the Race Direction, then the following screen will be shown (**Fig. 15**).

Fig.15

ATTENTION: even if the screen of the device changes after the confirmation of the red flag, the test is still **SUSPENDED**, it is therefore necessary to continue to follow the red flag procedure until the end of the Special Stage.
