RECONNAISSANCE CONTROL WITH APP “TRACKY”

A) Preparation: Make sure you have a suction cup or phone holder, a charging cable, and a phone compatible with the app. Your data connection must be stable and your battery must be charged for the entire duration of the reconnaissance.

B) Disable power optimizations: For optimal performance, we recommend disabling power optimizations on your phone.

C) Download the SPORTTRAXX TRACKY app from the Apple Store or Play Store. The QR codes are below.

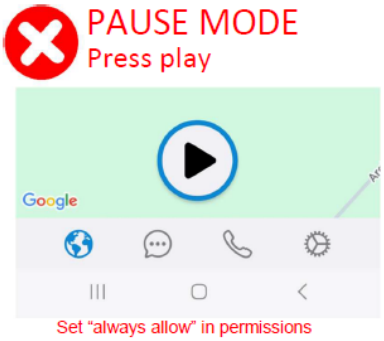

D) Registration: Open the app, enter the numeric code provided, click "Yes" for location permissions, and set "Always Allow" for proper operation.

E) Before the reconnaissance, press PLAY: The app will activate and you can monitor your speed in real time. If you exceed the speed limit, you will receive an audible and visual alarm. By clicking on the map, you can see your position on the route in real time.

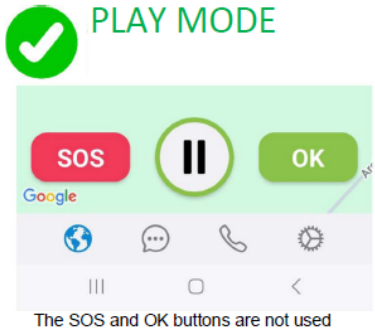

Note: Clicking the STOP button interrupts the GPS connection and data transmission.

After completing your reconnaissance, keep the app playing for at least 15 minutes under phone coverage so it can transmit the data.
