	Location:	Date:	Time:
Drivers' briefing	Internet (DNB)	30.10.2022	

All necessary information will be communicated with CoC Communications published on the Digital Notice Board.

SR Art. 12.12.6 Disinfection of Wheels and Tyres (new)

African swine fever is a disease that only affects pigs (domestic and wild). It is transferred directly from animal to animal or indirectly via objects to which the virus adheres. **The virus cannot be transferred to humans. Due to the outbreak of swine fever in the rally region, the following procedures must be followed.**

All wheels/tires used on the Special Stage must be stored separately in the service park so that they can be disinfected by a disinfection team. This team will visit each service bay and disinfect the tyres.

Before the last TC (Finish), the competition vehicles must drive to a disinfection zone described in the itinerary and in the Road Book, where the wheels and wheel housings are disinfected by appropriate personnel.

Leaving the rally region with wheels/tyres that have not been disinfected is a violation of the regulation of the state of Saxony and therefore a violation of the regulations applicable to this rally.

Uwe M. Schmidt
 Clerk of the Course
