

SPORT TRAXX

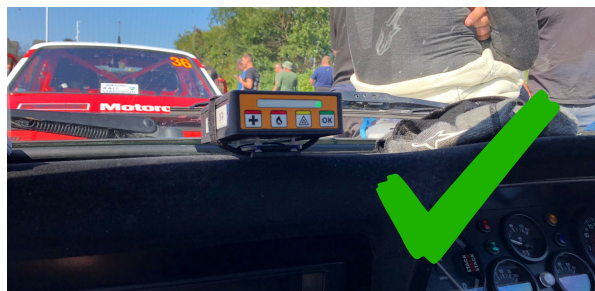

Installation Instructions For Spottraxx Tracking Devices

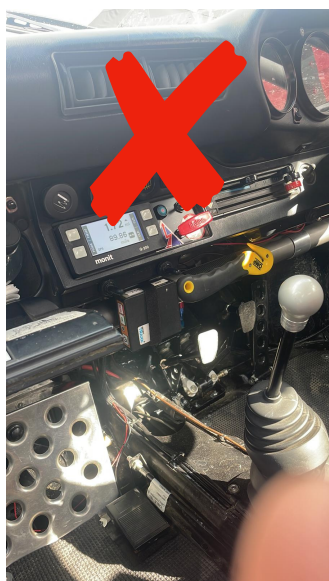

The device must be fitted in the centre of the dashboard accessible to both Driver and Co-Driver.

The cradles supplied will fit any Sporttraxx device and must be securely fitted to the dashboard.

Cradles not fitted correctly will need to be corrected before passing scrutineering.

This is how the device is fitted correctly. Centre of the dash with the front of the device facing Driver and Co-Driver, able to see the red flag and function buttons. The antenna is within view of the windscreen giving optimum connection.

These devices are **NOT** fitted correctly for many reasons.

1. Driver or Co-Driver can't see the front of the device.
2. Antenna pointing downwards into the car and not at the sky affecting the connection.
3. Device is situated among other electrical equipment which can hamper the connection.
4. The led lights can **NOT** be seen so if a Red Flag was issued no chance to see it and penalties will be applied if the Red Flag request isn't acknowledged.
