

There must be no obstructing or shielding material between the bottom of the transponder (see illustration) and the track surface.

The transponder must be mounted as close to vertically as possible.

The bottom of the transponder must not be mounted higher than:

60 cm above the ground for cars;
30 cm above the ground for karts.

If required, a dedicated transponder mounting bracket can be purchased from the official timekeeper.

Transponderi alumise külje (vt joonist) ja raja vahele ei tohi jääda ühtegi takistavat ega varjestavat kihti.

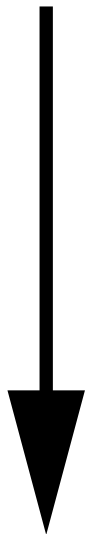

Transponder peab olema kinnitatud võimalikult vertikaalsesse asendisse.

Transponderi alumine serv ei tohi paikneda maapinnast kõrgemal kui:

60 cm autodel;
30 cm kartidel.

Vajaduse korral on võimalik osta ajamõõtjalt spetsiaalne transponderi kinnitus.

SKY / TAEVAS

GROUND / MAAPIND

Examples of transponder mounting are shown below. The mounting location may vary, but it must be ensured that the transponder is securely fastened and cannot come loose or be damaged during the event.

Allpool on toodud näited transponderi kinnitamisest. Kinnituskoht võib varieeruda, kuid tuleb veenduda, et transponder on kindlalt kinnitatud ning ei saa sõidu ajal lahti tulla ega kahjustada.
