OFFRAID

IPHONE

HELLAS RALLY 24H

Joining the race with OffRaid

OffRaid sends your live position to the race organisers. Complete these steps **before you arrive**, at home and on Wi-Fi.

YOU NEED

- An iPhone with iOS 16 or newer
- Mobile data on that iPhone during the race
- About 1.5 GB of free storage
- Your race number and your Apple Account email

1 Get OffRaid for iPhone

For Hellas Rally 24h, OffRaid for iPhone is installed through **TestFlight**, Apple's official app for distributing apps before they appear in the App Store.

1. Send an email to **support@offraid.com** with the subject **Hellas Rally 24h – iPhone** and write:
   - your full name and race number,
   - the email address of your **Apple Account** (Apple ID). You find it on the iPhone in **Settings** → tap your name at the top — the email is shown under your name.
2. You receive an invitation email from **TestFlight** for OffRaid. If it does not arrive, check your Junk folder.
3. On the iPhone, install **TestFlight** from the App Store (free, by Apple).
4. Open the invitation email **on the iPhone** and tap «**View in TestFlight**» → «**Accept**» → «**Install**».
5. Open OffRaid from the Home Screen. The small orange dot next to its name is normal for TestFlight apps.

> Already have OffRaid from TestFlight? Open TestFlight and tap «**Update**» if it appears, so you ride with the latest version.

2 Download the offline map of Greece

Do this at home, on Wi-Fi. The map then works with no signal at all.

1. The first time you open OffRaid it shows «**Welcome to OFFRAID**» — tap «**Choose your map**».
   Later you can always open it from the menu ☰ → «**Offline maps**».
2. In «**Country maps**», find **Greece** (under Europe) and tap «**Download**». The map is about 0.8 GB; routing data is downloaded with it.
3. Keep OffRaid open until Greece shows «**Downloaded**» or «**Active**».

3 Join Hellas Rally 24h

1. Open the menu ☰ → «**Group riding**» → tab «**Event**» → «**Scan event QR**».
2. If asked, allow OffRaid to use the camera.
3. Point the scanner at the QR code below. If you are reading this on the same phone, take a screenshot of the code and tap «**Scan from image**».

Hellas Rally 24h
`offraid.com/j/hellasrally24h`
Scan it **from inside OffRaid**, not with the phone's camera app.

4. The window «**Join Hellas Rally 24h?**» opens. Enter «**Your name**» and your «**Race number**» exactly as the organisers gave it to you.
5. Tick the consent box (the organisers and their medical and support staff see your position, name and number during the event) and tap «**Join**».
6. OffRaid confirms with «**You are in: Hellas Rally 24h**». When the phone asks for permissions, answer:

Location	«**Allow While Using App**», with **Precise** on.
Notifications	«**Allow**» — messages from the organisers arrive as notifications.

4 Check that the organisers receive you

Menu ☰ → «**Group · sharing ON**» (the new name of «**Group riding**» once you have joined) → tab «**Event**»:

- Under «**Connection with the organizers**», **GPS**, **Network** and **Joined** are green.
- The line «**The organizers saw you … ago**» appears.
- «**My race number**» shows your number with ✔ **registered**. Wrong number? Tap «**Change**».

From now on keep OffRaid running — with the screen off or in the background is fine. **Do not close it from the recent-apps list.** If the phone restarts, simply open OffRaid again: it rejoins the race by itself.

Internet is required

The device running OffRaid needs **mobile data during the race** to send your position to the organisers. Where there is no signal, OffRaid stores your positions and sends them as soon as the network returns.

If the device you ride with has no SIM card (for example a tablet), turn on **Personal Hotspot** on your iPhone and connect the other device to it over Bluetooth, or install OffRaid on a device that has mobile data.

Questions or a problem?
Write to us with your name, race number and phone model.
